Part I EQUIVARIANT DEGREE THEORY: TECHNICAL TOOLS

2	Preliminaries	25
2.1	Basic Definitions	25
2.2	Elements of Representation Theory	30
2.2.1	Finite-dimensional G -Representations	30
2.2.2	Complexification and Conjugation	33
2.2.3	Character of Representation	35
2.2.4	Haar Integral	35
2.2.5	Isotypical Decomposition	35
2.2.6	Decomposition of $GL^G(V)$	37
2.2.7	Banach G -Representations	37
2.3	Equivariant Extensions	40
2.4	Elements of Smooth Equivariant Topology	44
2.4.1	Basic Facts from Differential Topology	44
2.4.2	G -Vector Bundles	46
2.4.3	G -Manifolds	47
2.4.4	Orientation on G -manifolds	49
2.4.5	Bi-orientable Compact Lie Groups	52
2.4.6	Local Brouwer Degree	54

2.5	Numbers $n(L, H)$	56
2.5.1	Definition	56
2.5.2	Interpretation of the Numbers $n(L, H)$	58
2.6	Elements of Bordism Theory	59
2.6.1	Oriented Bordism	59
2.6.2	Singular Oriented Bordism and Whitney Theorem	60
2.6.3	Singular Oriented Bordism and Homology	61
2.6.4	Framed Bordism	62
2.6.5	Framed Equivariant Bordism Relation	63
2.7	Bibliographical Remarks	66
3	Equivariant Degree Theory: Construction and Basic Properties	67
3.1	Stable Equivariant Homotopy Groups of Spheres	67
3.1.1	Non-Equivariant Case	68
3.1.2	Equivariant Case	71
3.2	Construction of Equivariant Degree	73
3.2.1	Non-Equivariant Case	73
3.2.2	Equivariant Case	74
3.3	Regular Normal Approximation of Equivariant Maps	76
3.3.1	Normal Maps: Definition and Examples	77
3.3.2	Normal Approximations	79
3.3.3	Regular Normal Approximations	82
3.4	Structure of the Group Π^G : Pontryagin-Thom Isomorphism	87
3.4.1	Equivariant Degree Techniques	87
3.4.2	Decomposition of the Group Π^G	89
3.4.3	Group $\Pi(H)$ and Equivariant Bordism: Pontryagin-Thom Isomorphism	91
3.5	Computations of Primary Groups $\Pi(H)$	92
3.5.1	Equivariant Bordism Approach	93
3.5.2	Fundamental Domain Approach	95
3.6	Computations of the Secondary Groups $\Pi(H)$ for $n = 1$	99
3.6.1	Homomorphism Φ and Short Exact Sequence	99
3.6.2	Homomorphism p^* and Five Lemma	101
3.7	Bibliographical Remarks	102
4	S^1-Equivariant Degree and Primary Degree for One Free Parameter	105
4.1	Primary Equivariant Degree	106
4.1.1	Primary Equivariant Degree: Construction	106
4.1.2	Primary Equivariant Degree: Justification	108
4.1.3	Primary Equivariant Degree: Basic Properties	108
4.1.4	Axiomatic Approach	112
4.2	Axiomatic Definition of the S^1 -Equivariant Degree	112
4.2.1	Basic Maps and m -Folding	113

4.2.2	Formulation of the Main Result and Immediate Consequences of Axioms	113
4.3	Proof of Theorem 4.11: Preliminaries and Central Lemma	115
4.3.1	Positive Orientation in a Slice and Central Lemma	115
4.3.2	Proof of Lemma 4.14	117
4.4	Proof of Theorem 4.11: Existence and Uniqueness	121
4.4.1	Existence	121
4.4.2	Uniqueness	121
4.5	Computation of S^1 -Degree via Reduction to Basic and \mathbb{C} -Complementing Maps	123
4.5.1	Statement of the Problem	123
4.5.2	\mathbb{C} -Complementing Maps and Suspension Procedure	124
4.5.3	Homotopy Factorization: Properties of $GL^G(V)$	128
4.5.4	Splitting Lemma	130
4.5.5	S^1 -Degree Formulae	132
4.6	Recurrence Formula	134
4.6.1	Preliminaries	134
4.6.2	Proof of Theorem 4.25	136
4.7	Bibliographical Remarks	138
5	Basic Maps and Computations of Twisted Primary Degree	139
5.1	Twisted Subgroups of $G = \Gamma \times S^1$	140
5.2	Twisted Primary Degree	142
5.3	Examples and Computations	143
5.3.1	Quaternionic Units Group Q_8	143
5.3.2	Dihedral Group D_N	145
5.3.3	Tetrahedral Group A_4	150
5.3.4	Octahedral Group S_4	153
5.3.5	Icosahedral Group A_5	156
5.3.6	Orthogonal Group $O(2)$	161
5.4	Twisted Subgroups of $SO(3) \times S^1$ and Numbers $n(L, H)$	162
5.5	Basic Maps for Irreducible Representations of $G = \Gamma \times S^1$	165
5.6	Computations of Twisted Degrees of the Basic Maps	170
5.6.1	Computational Formula for Basic Maps with one Parameter	171
5.6.2	Computational Formula for Basic Maps without Parameter	172
5.7	Examples of Computations of the Equivariant Degree for Basic Maps	172
5.7.1	Degrees of Basic Maps for the Group Q_8	173
5.7.2	Degrees of Basic Maps for the Dihedral Group D_N	174
5.7.3	Degrees of Basic Maps for the Tetrahedral Group A_4	177
5.7.4	Degrees of Basic Maps for the Octahedral Group S_4	178
5.7.5	Degrees of Basic Maps for the Icosahedral Group A_5	181
5.7.6	Degrees of Basic Maps for the Group $O(2)$	184

5.8	Twisted Degree of Basic Maps for the Group $SO(3)$	185
5.8.1	Irreducible representations of $SO(3) \times S^1$	185
5.8.2	Computation of Twisted Degrees for $SO(3) \times S^1$ -Actions	189
5.9	Bibliographical Remarks	190
6	Algebraic Properties of the Equivariant Degree	191
6.1	Computations of the Burnside Ring	191
6.2	$A(\Gamma)$ -Module Structure on $A_1^t(\Gamma \times S^1)$ and Multiplication Tables	195
6.3	Examples of $A(\Gamma)$ -Modules $A_1^t(\Gamma \times S^1)$	197
6.3.1	$A(Q_8)$ -Module $A_1^t(Q_8 \times S^1)$	198
6.3.2	$A(D_N)$ -Module $A_1^t(D_N \times S^1)$	198
6.3.3	$A(A_4)$ -Module $A_1^t(A_4 \times S^1)$	201
6.3.4	$A(S_4)$ -Module $A_1^t(S_4 \times S^1)$	203
6.3.5	$A(A_5)$ -Module $A_1^t(A_5 \times S^1)$	203
6.3.6	$A(O(2))$ -Module $A_1^t(O(2) \times S^1)$	203
6.4	Computation of the $A(SO(3))$ -Module Structure for $A_1^t(SO(3) \times S^1)$	203
6.5	Multiplicativity Property for the Twisted Degree	207
6.6	Bibliographical Remarks	211
7	Secondary Groups and Secondary Equivariant Degree for $\Gamma = SO(3)$	213
7.1	Preliminary Computations	213
7.2	Computations of Reduced Secondary Groups $\Pi_*(K)$ for $\Gamma = SO(3)$	216
7.2.1	Simple Cases	216
7.2.2	Representations \mathcal{V}_j^t	217
7.2.3	Computation of $\Pi_*(K)$: Regular Cases	219
7.2.4	Computation of $\Pi_*(K)$: First Typical Exceptional Case	221
7.2.5	Computation of $\Pi_*(K)$: Second Typical Exceptional Case	224
7.2.6	Computation of $\Pi_*(K)$: Conclusions	226
7.3	Some Remarks on Computations of the Secondary Degree	228
7.3.1	Computation of the Reduced Degree $\deg_R^*(f, \Omega)$	228
7.3.2	Computation of the \mathbb{Z}_2 -Component of $\deg_R^s(f, \Omega)$	231
7.4	Computations of Secondary Degree for $\Gamma = SO(3)$: Special Cases	232
7.5	Bibliographical Remarks	234
8	Orthogonal G-Equivariant Degree (by H. Ruan)	235
8.1	Equivariant Orthogonal Maps	235
8.2	S^1 -Normality for G -Orthogonal Maps	237
8.3	Construction of Orthogonal Degree	240
8.4	Orthogonal Degree of G -Orthogonal Linear Maps	243

8.5 Bibliographical Remarks 247

Part II APPLICATIONS OF EQUIVARIANT DEGREE TO DIFFERENTIAL EQUATIONS AND BIFURCATION PROBLEMS

9 Setting for Studying Ordinary Differential Equations with Symmetries 251

9.1 Infinite-Dimensional Equivariant Degree 252

9.1.1 Leray-Schauder Equivariant Degree 252

9.1.2 Nussbaum-Sadovskii Equivariant Degree 255

9.2 Hopf Bifurcation Problem for ODEs without Symmetries 259

9.2.1 Statement of the Problem 259

9.2.2 S^1 -Equivariant Reformulation of the Problem 261

9.2.3 S^1 -Degree Method for Hopf Bifurcation Problem 264

9.2.4 Deformation of the Map \mathfrak{F}_ζ 270

9.2.5 Product Formula for S^1 -Deg $(\mathfrak{F}_\zeta, \Omega)$ 274

9.2.6 Crossing Numbers 275

9.2.7 Conclusions 279

9.3 Hopf Bifurcation Problem for an ODE System with Symmetries 280

9.3.1 Symmetric Hopf Bifurcation and Local Bifurcation Invariant 280

9.3.2 Computation of Local Bifurcation Invariant: Reduction to Product Formula 283

9.3.3 Computation of Local Invariant: Reduction to Crossing Numbers and Basic Degrees 284

9.3.4 Summary of the Equivariant Degree Method 287

9.3.5 An ODE System with $SO(3)$ -Symmetries 289

9.4 Bibliographical Remarks 290

10 Symmetric Hopf Bifurcation for Functional Differential Equations 291

10.1 Symmetric Hopf Bifurcation for FDEs: General Framework ... 292

10.2 Computation of the Local $\Gamma \times S^1$ -Invariant 297

10.3 Γ -Symmetric FDEs Describing Configurations of Identical Oscillators 300

10.3.1 The Model 300

10.3.2 Examples 302

10.3.3 Characteristic Equation for a Symmetric Configuration of Identical Oscillators 305

10.3.4 Applications of the Equivariant Degree 306

10.4 Hopf Bifurcation Results for Concrete Configurations of Identical Oscillators 307

10.4.1 Model and Equivariant Degree Data 307

10.4.2	Equivariant Degree: First Coefficients	310
10.4.3	Usage of Maple [©] Routines	311
10.4.4	Hopf Bifurcation in a System with Dihedral Symmetries	314
10.4.5	Hopf Bifurcation in a System with Tetrahedral Symmetries	321
10.4.6	Hopf Bifurcation in a System with Octahedral Symmetries	322
10.4.7	Hopf Bifurcation in a System with Icosahedral Symmetries	322
10.5	Symmetric Hopf Bifurcation for Neutral FDEs	326
10.6	Hopf Bifurcation in Transmission Lines Model (by H. Ruan) . .	329
10.6.1	Symmetric Configurations of Lossless Transmission Line Models	329
10.6.2	Statement of the Problem	338
10.6.3	Characteristic Equation and Isolated Centers	339
10.6.4	Negative Spectrum σ_-	341
10.6.5	Crossing Numbers $t_{j,1}$	342
10.7	Concrete Results for Selected Symmetry Groups and Usage of Maple [©] Package	344
10.8	Global Bifurcation Problems	347
10.8.1	Setting for Symmetric Global Hopf Bifurcation Theory .	348
10.8.2	Examples	350
10.9	Bibliographical Remarks	355
11	Symmetric Bifurcation Problems for Parabolic Systems of Equations	357
11.1	Fredholm Operators	357
11.2	Symmetric Bifurcation in Parametrized Equivariant Coincidence Problems	364
11.2.1	Functional Setting for Equivariant Coincidence Problems	365
11.2.2	Bifurcation Invariant for the Equivariant Coincidence Problem	367
11.3	Hopf Bifurcation for FPDEs with Symmetries	370
11.3.1	Statement of the Problem	370
11.3.2	Normalization of the Period	371
11.3.3	$\Gamma \times S^1$ -Setting in Functional Spaces	372
11.3.4	Γ -Symmetric Steady-State Solutions to (11.18)	373
11.3.5	Characteristic Equation	374
11.3.6	Local Bifurcation $\Gamma \times S^1$ -Invariant and Its Computation	377
11.3.7	Local Bifurcation Result	380
11.4	Symmetric System of Hutchinson Model in Population Dynamics	381
11.4.1	Hutchinson Model of an n Species Ecosystem	381
11.4.2	Symmetric System of the Hutchinson Model	382
11.4.3	Characteristic Equation and Isolated Centers	383

11.4.4	Computations for the Local Bifurcation $T \times S^1$ -Invariant	384
11.4.5	Usage of Maple [©] Package and Concrete Results for Selected Symmetry Groups	387
11.5	Hopf Bifurcation in the Taylor-Couette Problem	394
11.5.1	Description of the Taylor-Couette Model	394
11.5.2	Taylor-Couette Problem as a Parametrized $O(2) \times S^1$ -Equivariant Coincidence Problem	397
11.5.3	Characteristic Equation for Taylor-Couette Problem	399
11.5.4	Local Hopf Bifurcation Invariant for the Taylor-Couette Problem: the Case of (j, j') -Mode Interaction	403
11.6	Bibliographical Remarks	404
12	Systems of Symmetric Van Der Pol Equations	405
12.1	Systems of Van Der Pol Equations with Symmetries	405
12.2	Reformulation as an Equivariant Fixed-Point Problem with One Parameter	407
12.2.1	Preliminaries	407
12.2.2	Setting in Functional Spaces	408
12.2.3	Operator Reformulation of the Problem (12.9): Setting for the Equivariant Degree Treatment.	409
12.2.4	Hirano-Rybicki Approach: Reduction to a Computation of the Equivariant Degree	411
12.3	Computations of the Equivariant Degree: Reduction to Basic Maps	414
12.3.1	Finite-Dimensional Reduction	414
12.3.2	Isotypical Decomposition and Basic Maps	416
12.3.3	Product Formula	417
12.4	Existence of Symmetric Periodic Solutions in Van Der Pol Systems	419
12.4.1	A Priori Estimates	419
12.4.2	Existence Result: Formulation	422
12.4.3	Proof of Theorem 12.7	423
12.5	Conclusions and Applications	425
12.5.1	Usage of Maple [©] Routines	426
12.5.2	Conclusions for the Dihedral Group	426
12.5.3	Conclusions for the Tetrahedral Group	427
12.5.4	Conclusions for the Octahedral Group	428
12.5.5	Conclusions for the Icosahedral Group	428
12.6	Bibliographical Remarks	430
13	Variational Problems with Symmetries (by H. Ruan)	431
13.1	Orthogonal G -Equivariant Degree for Maps in Hilbert Space	431
13.2	Autonomous Newtonian System with Symmetries	434
13.2.1	Setting in Functional Spaces	436

13.2.2	Existence Result	438
13.2.3	Computation of \deg_1	439
13.2.4	Concrete Existence Results for Selected Symmetries	442
13.3	Bifurcation Problem for Symmetric Variational Equations	449
13.3.1	Setting in Functional Spaces	449
13.3.2	Local Bifurcation Invariant	451
13.3.3	Computation of $\omega(\lambda_o)$	453
13.3.4	Computational Results for Symmetric Variational Bifurcation Problems	455
13.4	Bibliographical Remarks	462

Part III APPENDICES

	Justification and Summary	465
A1	Maple[©] Routines (by A. Biglands)	469
A1.1	Preparation of Maple [©] Routines	469
A1.2	Generation of Multiplication Tables	470
A1.3	Generation of Basic Degrees	474
A1.4	Useful Maple [©] Procedures for Computations of the Equivariant Degrees	476
A1.5	Usage of the Equivariant Degree Library for Maple [©]	478
A2	Complex Structures in Algebras, Poincaré Index and Bounded Solutions to Homogeneous ODEs (by Z. Balanov, Y. Krasnov and W. Krawcewicz)	483
A2.1	Differential Systems in Algebras	483
A2.1.1	Algebras: Basic Definitions	484
A2.1.2	Some Special Classes of Algebras	486
A2.1.3	Powers, Monomials and Derivation of Polynomials in Non-Associative Algebras	490
A2.1.4	Quadratic ODE's, Riccati Equation and Algebraic Insolubility	491
A2.1.5	Examples of Quadratic Systems	492
A2.2	Complex Structures in Two-Dimensional Algebras and Poincaré Index of Quadratic Maps	493
A2.2.1	Complex Structures	493
A2.2.2	Poincaré Index of Planar Quadratic Maps and Norms in Algebras	495
A2.2.3	Index of Division Algebras and Complex Structures	497
A2.2.4	Index of Algebras with 2-Nilpotents and Complex Structures	499
A2.3	Complex Structures in Two-Dimensional Algebras and Poincaré Index of Cubic Maps	502

A2.3.1	General Strategy for Computing $\text{ind}(0, x^3)$	503
A2.3.2	Negative 3-Idempotents in Algebras without both 2- and 3-Nilpotents	503
A2.3.3	Complex Structures in Regular Algebras with 2-Nilpotents	505
A2.3.4	Complex Structures in Regular Algebras with 3-Nilpotents	506
A2.3.5	Negative 3-Idempotent and $\text{ind}(0, x^3)$	508
A2.4	Complex Structures and Bounded Solutions to the Riccati and Cubic Equations	508
A2.4.1	Bounded Solutions: Definition and Motivating Examples	508
A2.4.2	Bounded Solutions to the Real Two-Dimensional Riccati Equation	509
A2.4.3	Bounded Solutions to the Complex Two-Dimensional Riccati Equation	512
A2.4.4	n -Dimensional Corollaries	513
A2.4.5	System (A2.14) via Complex Structures	515
A2.4.6	Complex Structures in Two-Dimensional Algebras and Bounded Solutions to $\dot{x} = x^3$	516
A2.5	Systems Homogeneous at Infinity	517
A2.5.1	Muhamadiyev-type Results	517
A2.5.2	Constructing Regular Guiding Functions: Statement of the Problem	519
A2.5.3	Derivation in M_A and Regular Guiding Functions	520
A2.6	Bibliographical Remarks	521
A3	Examples of Equivariant Homogeneous Maps, Symmetric Powers and Atiyah-Tall Theorem (by Z. Balanov, W. Krawcewicz and A. Kushkuley)	523
A3.1	Goal and Motivation	523
A3.2	Examples	524
A3.3	Construction	526
A3.4	More on Example A3.1 and Atiyah-Tall Theorem	529
A3.5	Bibliographical Remarks	532
References	533
Index	547
